

Gas Fuelling Technology Ltd

DS/012/09

The Company - Its Experience

Gas Fuelling Technology Ltd is a UK based specialist Consultant Engineering and Project Management company specialising in offering services to clients who have available and/or are considering the use of alternative sources of gas fuels, such as

Natural Gas, Flare Gas, Coal Bed and Mine Methane (CBM and CMM), Landfill Gas and Biogas / BioMethane and other **Stranded Gas** sources.

GFT Personnel

Gas Fuelling Technology Ltd is able to offer its clients project expertise to assess, analyse and advise on their operation and offer package solutions including feasibility, detailed design, financial assessment, implementation, operation and training.

We are a small team of specialist expert mechanical and chemical engineers, commercial and financial professionals with over 100 years of experience in our specialist and associated fields.

Our expertise and experience has been gained from involvement in major projects all over the world including the UK, Ireland, France, Germany, Holland, Italy, Iceland, Poland, Middle East, Pakistan, Turkey, Iran, Iraq and Bangladesh. Our personnel have previously held senior posts in International Oil and Gas Companies, Industrial Gas Companies, High Pressure Gases Engineering, Inspection and manufacturing companies, distribution and logistics companies and vehicle OEMs.

GFT personnel have been or are involved in

- Over 80% of all Natural Gas Vehicle fuelling projects in the UK over the last 15 years including the two largest CNG refuelling stations with capacities of over 2000 SCM/hr each.
- Two OEM projects involving the development and conversion of diesel HGV trucks to run on dedicated natural gas.
- The design, construction, testing and service of a large portion of high pressure gases transportation trailer systems operating in the UK over the last 20 years...

Gas Fuelling Technology Ltd

DS/012/09

- The design and supply of the first VGP (Virtual Gas Pipeline) type gas transportation trailer system in Iran to expand its national gas supply capability beyond its current pipeline grid.
- The design and supply of the first VGP (Virtual Gas Pipeline) system for rescuing stranded gas from a UK on shore oilfield.
- The assessment of gas rescue projects in the UK, Scotland, North Africa and Pakistan.
