

Gas Fuelling Technology Ltd

DS/011/09

The Company - Its Services

Gas Fuelling Technology Ltd is a UK based specialist Consultant Engineering and Project Management company offering services to clients who are considering the use of alternative sources of fuels, such as **Natural Gas, Biogas/BioMethane** for use in applications such as local power generation , local CHP and vehicle fuel.

Virtual Pipeline Infrastructure Solutions

Gas Fuelling Technology Ltd can provide system solutions for non pipeline gas distribution.

We can advise, offer and implement solutions for non-pipeline distribution of **Natural Gas and Biogas/BioMethane**, where there is little or no existing pipeline infrastructure.

This can include the capture and conditioning of stranded sources of gas with the potential for local use or by transport to and injection into a distribution grid entry point or power generation plant.

Vehicle Fuel Solutions

Natural Gas and **Biogas/BioMethane** technology is being implemented around the world for vehicle fuel with ever greater numbers of vehicles switching to this cleaner, more efficient and more economic fuel.

Ten million vehicles now run on **Natural Gas** and **Biogas/BioMethane** including buses, refuse vehicles, delivery vans, trucks, Heavy Goods Vehicles, cars and even fork lift trucks.

Gas fuelling Technology Ltd can undertake feasibility studies, advise and project manage the conversion/substitution of existing conventionally fuelled vehicle fleets including the conversion of diesel and petrol engine vehicles.
